

# Implant Restorations Made Easy

Our manually driven right-angled driver makes it easy to place posterior screws in the mandible or maxilla.

## RAD Right Angle Driver

- Maximize access and comfort with the ability to rotate the head to the exact angle needed
- Make quick and easy abutment changes in posterior
- Manually driven, no need to connect to hand piece

## ATA Torque Adapter

- 7 torque values 10, 15, 20, 25, 30, 32, 35 Ncm
- Easily connects to Right Angled Driver (RAD)
- Never over torque. RAD makes a “clicking” sound when desired Ncm is achieved
- Easily set Ncm to place desired implant
- Autoclavable

## BITS KIT

Bits for Right-Angled Drivers  
Set of 7

- Compatible with all major implant systems
- Multiple bit options cover all existing and new patients
- Bits are used with a right-angled driver or any standard latch-type contra-angle system
- Ideal for posterior abutments and cover screws in the mandible and maxilla
- Each bit is laser etched for quick identification
